Dear Ms. Roth:

Re: Request to Decommission Five Ground Water Monitoring Wells: *Terminal 91 Tank Farm Site Agreed Order No. DE 98HW-N108*

This correspondence serves as official approval by the Washington State Department of Ecology (Ecology), for the proposed decommissioning of the five monitoring wells listed within your request received by Ecology on June 30, 2004. It is our understanding that the monitoring wells will either be replaced or a better alternative will be proposed once the demolition of the tank farm has been completed. Ecology should be notified when the decommissioning of the monitoring wells has actually begun, and again when it has been completed.

This would be an excellent opportunity to consider the long range goals for the cleanup of the site and propose a monitoring well replacement scenario that would take this into account. Different monitoring well locations and various designs to enhance product recovery, etc. should be considered.

If you have any questions or comments, please contact me at the Department of Ecology Northwest Regional Office by phone at (425) 649-7280 or by email at gtri461@ecy.wa.gov.

Sincerely,

G. Jones for
